## Glossary of Mathematical Words

**family of facts**

- using the numbers given, create addition and subtraction facts  
example:  $20 - 15 = 5$  would be  $15 + 5 = 20$  and  $5 + 15 = 20$   
 $20 - 5 = 15$  and  $20 - 15 = 5$

**ordinal numbers**

- ordering numbers using words  
example: ninth, fifteenth, twentieth

**place value**

- numbers broken down into hundreds, tens, ones, etc.  
example:  $246 = 200 + 40 + 6$  or  $2 \text{ hundreds} + 4 \text{ tens} + 6 \text{ ones}$

**sphere**

- a 3-dimensional round ball or globe shape

**word problem**

- using words to tell a problem  
example:  $4 + 5 = 9$  in words could be: Joan had 4 dogs and Tracy had 5 dogs. When they went for a walk in the park and let them play, they had 9 dogs altogether.
